

Mobility, the latest advance in technology, is now available to library staff who have long been confined to computer desks. SirsiDynix PocketCirc™ is a wireless circulation unit that frees library staff to serve users and perform both online and offline circulation operations – all without having to be at a desktop workstation.

Serve users throughout your library

SirsiDynix's handheld circulation tools give library staff the freedom to conduct daily circulation procedures as well as large inventory projects in either an offline or wireless online environment. With a handheld PDA device in a Windows® CE environment, SirsiDynix PocketCirc combines the power of a SirsiDynix Unicorn® Library Management System with the flexibility and ease of a handheld device. With the added ability to work wireless, imagine how easily staff can move about the library and conduct the normal check-in, check-out, use-item, inventory, and patron registration tasks.

Productivity on the move

Achieve greater productivity for library staff. Not only are they free to move about the building, they remain “plugged in” to the SirsiDynix system wherever they are. At peak check-out times, circulation staff can meet customer demands for quick processing – saving staff and users significant time.

Perform circulation functions online or offline

- Integrated with your SirsiDynix Unicorn® system
- Serve users anywhere inside or outside the library
- Shorten user wait times
- Increase staff efficiency through mobility
- Continue services even when offline

- Assist users when lines form at the circulation desk
- Move into stacks for on-the-spot assistance
- Charge materials and update records
- Update inventory information away from your computer
- Easily check out materials from a bookmobile
- Take advantage of community events to register new users on the spot
- Continue helping users when network problems or power outages occur, as you do circulation tasks in offline mode for later uploading

transactions to Unicorn. Never again will patience be tested when users must wait for the system to come back up before they can complete their transactions.

And PocketCirc's productivity is not limited to inside the library building. You can use it on bookmobiles to check out, renew, or check in materials. In addition, take it to events within the community where large groups gather to register new users on the spot. Think of how many people might be added to your user rolls when they can sign up while enjoying a concert, art exhibit, or other community activity. With PocketCirc productivity never stops!

During other times, staff can roam among the stacks to complete routine inventory functions. And all this takes place without any sacrifice in power or capabilities because with PocketCirc staff carry in their hands the power of their SirsiDynix system.

If users need assistance in the stacks, not only can staff guide them to the resource they need, materials can be checked out right on the spot. Also operations can continue when network interruptions or power failures would otherwise cease activities. With PocketCirc, staff can work offline, continuing to do whatever is needed, and then later uploading

Bringing Knowledge to Life.
