

SirsiDynix Enterprise

Search and Discovery

Reveal the breadth and depth of your collection with SirsiDynix Enterprise. Enterprise brings out the full potential of all your content with a single search that spans your databases, physical catalog, and digital catalog. It gives you accurate, human-friendly results and a customizable look-and-feel that integrates with your website. Take charge of your community's discovery experience; contact your SirsiDynix representative today to learn more.

Expand your library's reach
Create custom profiles to support the different languages in your community. Embed the Enterprise search bar in your existing library website, and organize library resources in digital rooms for easy discovery and display.

Deliver results your users want
Offer fuzzy matching to improve search results and "Did you mean" features to combat misspellings. Bring your collections to life with book cover displays, user reviews, and bestseller lists. Provide facets like publication, date, or item type to refine user searches and get the most meaningful results.

Integrate with EDS
Give your users easy access to all the information they need. Enterprise integrates with EBSCO Discovery Service to return catalog and EDS results for every search, all in the same interface. Drive up use of your databases with easy access and powerful facets.

The Power of SirsiDynix Enterprise

1. Search Facets

Help users refine searches with intuitive, customizable facets. Users can limit by date, material type, author, format, and more. If those aren't enough, you can define custom facets to make sure your users get exactly what they need.

2. Library Customization

Make Enterprise your own with library branding. Use your logo, incorporate your colors, and pick your own background design. Build profiles to customize the search experience for special audiences or different libraries in your system.

3. User Account Access

Users can review their library accounts, place holds, review and pay fines and fees, and create lists of materials for future reference. You can even allow new users to register for library services.

4. Social Media Integration

Put your library in the social media limelight, keeping you fresh in your community's mind while attracting new users to your site.

Go BLUE:

Maximize your SirsiDynix software by using it together

Enterprise works with other BLUEcloud products to give your community a holistic library experience. Enterprise syncs with eResource Central, letting you load thousands of electronic titles to your catalog in minutes without touching a MARC record. Together, Enterprise and eRC give you access to more content vendors than any other system can, as well as in-catalog downloads, availability, and previews for your electronic content.

Enterprise also works with BookMyne, BookMyne+, and Social Library to expand your library's reach to your community's pockets and Facebook pages.
