SirsiDynix cloud-based solution reaches 750th customer

The SirsiDynix Cloud solution for libraries provides state-of-the-art monitored security, 99.99% uptime and a fully scalable, managed solution for libraries.

PROVO, UTAH (June 24, 2011) – SirsiDynix, the world’s leading provider of library automation solutions, today announced service to the 750th customer of its cloud computing service, SirsiDynix® Cloud. Connecting 13 million users globally and hosting more than 45 million bibliographic records, SirsiDynix Cloud is the most widely used cloud solution in the industry.

“For scalability, efficiency and cost-effectiveness, there is no better solution than SirsiDynix Cloud,” said SirsiDynix Chief Executive Officer Matt Hawkins. “More than 7,000 Symphony, Horizon and Unicorn staff clients worldwide currently utilize the SirsiDynix Cloud to provide reliable, scalable, and efficient access to their library management solutions.”

The SirsiDynix Cloud service provides library customers:

- On-demand resources via highly scalable, clustered environments
- Data-protecting redundancies thanks to redesigned power distribution within facilities
- A reduced carbon footprint by eliminating major server and hardware requirements onsite
- The assurance of standard vendor alliances for the three core areas of infrastructure – server, storage and network.

The dedicated, main SirsiDynix collocation facility is equipped with an eight-station security camera system with 24-hour DVR playback capabilities. With a dedicated Cloud support team based in APAC, EMEA and North America, SirsiDynix incorporates best practices to continually improve the Cloud solution. Operating out of four world-class collocation facilities in all regions of the globe, SirsiDynix Cloud ensures customers 24/7 monitoring and response of all services 365 days of the year. Constant improvement to the Cloud offerings is a basic tenet of SirsiDynix’s planning and development processes.

“At SirsiDynix, we are always focused on improving web-based delivery of our products. We look forward to introducing new capabilities, including support for multi-tenancy, later in 2011,” Hawkins said. “These additions are a continuance of our commitment to improve performance, stability and high-availability capabilities for our customers and users.”
