

BLUEcloud ILL

Expand your library's offerings with a smooth, intuitive process for interlibrary loan. From your online catalog to tracking shipments, BLUEcloud ILL will make ILL simple for both staff and users.

Share with any library

Create resource sharing groups from any library you work with—no matter their library system. You will be able to link libraries together through BLUEcloud ILL or a standard NCIP connection to start borrowing and loaning materials.

Make ILL simple for your users

Even if you don't have an item in your collections, users will see the title in the catalog. When they pull up the request form, BLUEcloud ILL will automatically populate the publication information. No scouring the catalog for a request form, and no Googling the ISBN—users will just add their need-by date and submit.

Remove the guesswork

When you process a request in BLUEcloud ILL, you will automatically see which libraries have the item available. Staff will be able to choose the fulfilling site, and let BLUEcloud ILL do the rest. The item will pass seamlessly through both libraries, and you can check the request status at any time.
