BLUEcloud Lists

Show off your recommendations and save time on your everyday tasks, all from the same tool. BLUEcloud Lists will be both a curation app and the launchpad for many of your LSP workflows. Get organized and grab attention: BLUEcloud Lists will give you more power, from selection to discovery.

Collect all your favorite resources

Your staff will use the BLUEcloud Lists web tool to harvest metadata from your library and across the web, and store all your favorite resources in one place. Books, journal articles, newspaper editorials, YouTube videos and more—you will be able to put them all in BLUEcloud Lists.

Simplify your work

BLUEcloud Lists will be more than a recommendation tool—it will interact directly with other BLUEcloud apps. When professors design their syllabi in BLUEcloud Lists, any items in your library will be pushed to course reserve. To create a book display, you can just add the titles to BLUEcloud Lists and process them in bulk. No busywork, no hassle.

Gain visibility

Ready to share your lists with your users? You will be able to easily publish any list to the front page of the Enterprise discovery tool. With this prominent and attractive display, your recommendations will reach as many users as possible.

Start the conversation

BLUEcloud Lists will offer the same powerful curation tools to your users. They will be able to create unlimited lists of all their favorite materials and share these lists with friends. Get your users talking, and shift the conversation to your collections.
