June 23, 2023, LEHI, UT— SirsiDynix announced today that CloudSource—a new content solution offering a global aggregation of open access articles, eBooks, eTextbooks, and open educational resources (OER)—witnessed unprecedented growth in the second quarter of 2023.

Since the release of CloudSource in December of 2021—just over 18 months ago—a wide range of customers have been quick to select the comprehensive platform for its robust eResource management capabilities, including an intuitive discovery layer, customizable collection management tools, and powerful usage statistics.

And as the popularity of the product continues to rise, CloudSource has now reported its most successful quarter yet. In the last three months alone, CloudSource saw a record number of libraries adopting the product, expanding the existing customer base of 360 public, academic, school, and special libraries.

"Helping libraries shift their approach to electronic resource management—in a way that saves them money while empowering their users—is at the very heart of the CloudSource mission," says SirsiDynix Chief Executive Officer Bill Davison.

"And with each new institution that adopts CloudSource, we have the opportunity to deliver on this mission in extraordinary ways. We are honored to support every one of these libraries and organizations, and we can't wait to continue amplifying the reach and impact of open access resources to libraries and patrons everywhere."
