

BLUEcloud DISCOVERY

Every collection, any device, one search. Coming soon.

It's almost time to introduce your staff and patrons to SirsiDynix's next-generation discovery application, BLUEcloud Discovery. Built from the ground up on BLUEcloud architecture, this modern, fully responsive solution is designed to optimize performance, streamline the search experience, and deliver stronger search relevancy.

Read on to see what sets BLUEcloud Discovery apart, and what you can expect come launch.

The BLUEcloud Discovery difference

For library staff

Designed by librarians, for librarians. Speed up app configuration, maintenance, and training with BLUEcloud Discovery's easy-to-navigate UI and intuitive approach to daily workflows.

Responsive and accessible. Help more patrons reach your content with a WCAG 2.2 AA-aligned interface that includes a dark-mode toggle, responsive design across devices, and compatibility with common assistive technologies.

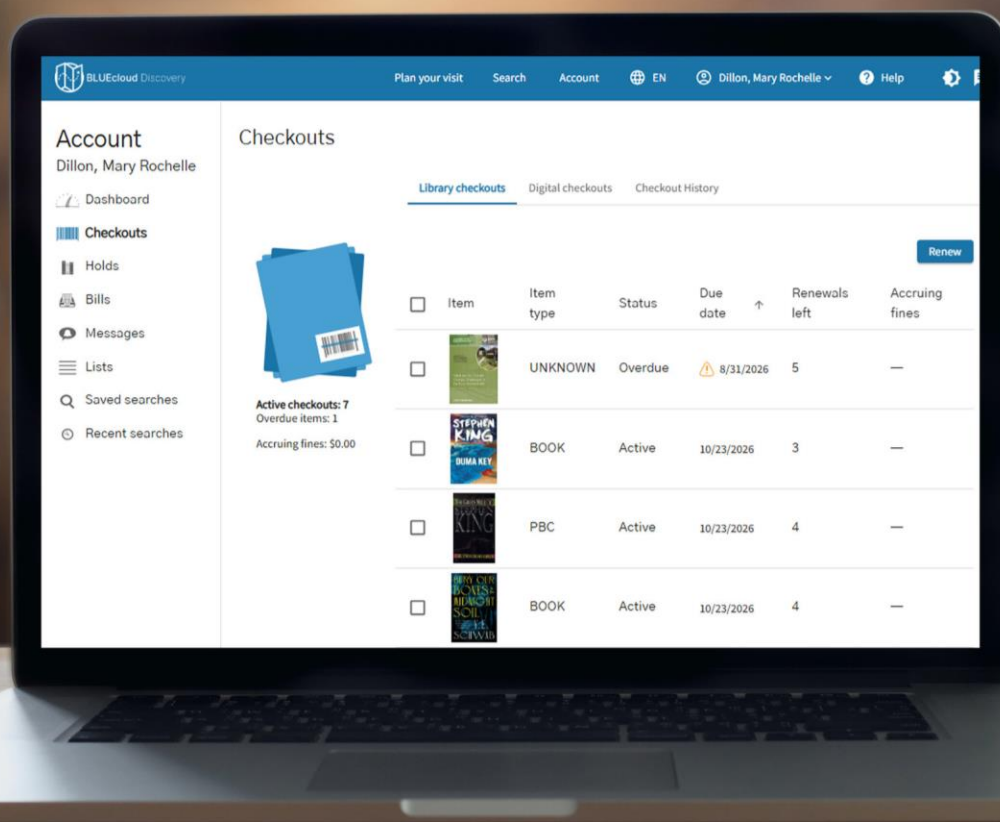

Shape the patron search experience. Decide what's discoverable and define how search results behave, configuring filters, display labels, grouped records, relevancy ranking, and search limits from a centralized search policy.

Deliver out-of-the-box relevancy solutions. Ensure patrons return results that match the search at hand with ready-made approaches to relevancy, like popular relevancy (which prioritizes availability) and research relevancy (which emphasizes topical relevancy).

Set your theme once, see it everywhere. Carry your library's branding across search results, item details, patron accounts, and your homepage by picking a predefined theme or using the theme generator to create your own, with colors automatically adjusted to meet WCAG AA contrast.

The BLUEcloud Discovery difference

For library patrons

Every source, one search.

Surface content from across your library's collections, including the ILS catalog, CloudSourceOA, eResource Central, and MARC collections, with a single search.

Unite your favorites in one place.

Pull titles into custom lists with the click of a button, then choose to share them with others, add notes, or set read dates to track the status of your TBR pile in real time.

Pick up right where you left off.

Save your most-frequent searches, filters and all, and receive visual alerts every time a new match hits the catalog.

Take control of your search results.

Use advanced search capabilities, like filters and record grouping, to build targeted searches that return highly precise results.

The BLUEcloud connection

Centralized configuration. Manage Discovery settings—and adjust individual details as needed—entirely through BLUEcloud Central.

Shared Policies. Keep rules consistent throughout the patron experience with hold and location policies shared across BLUEcloud Discovery and BLUEcloud Mobile2.

My Account. Offer patrons a quick view of:

- **Their Dashboard,** including checkouts, holds, bills, and simple alerts for anything overdue or unpaid.
- **Their Personal Information,** including their name, address, and contact information.

BLUEcloud DISCOVERY

The future of discovery at SirsiDynix is now. To learn how your library can get involved, please contact your sales representative, or scan the QR code to request a demo.
